

What I like	To make it perfect
Excellent topic and some good discussion, presented by knowledgeable testers – thanks for coming!	Need to change the process so that it isn't predicated on the assumption that "we do a Scrum process" – could do Kanban/XP etc.
Helped me to get more "grip" on testing in an agile context Emphasizing importance of testing in agile Sharing experiences	Less focus on the "phases"? -> phases are a bit context dependent
Interactive, the topic	Clear objectives, more focused discussion
Agile testing in the spotlight Small amount of theory	Fewer, more focused group questions Adjusting to the audience, which consisted mainly of developers and coaches
The open discussion & sharing of ideas	Technical debt could be added
Learned more about agile testing. ??? for more in-depth discussions	A bit more Cegeka experiences would have been fun
Group discussion Some company in Belgium is thinking about it	More tips & tricks from real Agile projects Use Scrum terminology -> the used terminology was not "universally" accepted
Te veel boekenwijsheid (Too theoretical)	
The discussion	
The discussion about the role of the tester	Have ample time, do it more in a round robin fashion
A nice way to learn new things and share knowledge	Print the slides and give them to participants
Interesting discussions at our table	Try to choose between asking a question and making a statement but don't ask questions that implicit a judgment
