

Rating	What I like	To make it perfect
	This was the first Fitnessse demo I've seen that was clear and that made me feel like trying it out	Plan more time (timeframe was a little too short)
8	Good examples Makes me want to try it out	A lot of technical problems at the start. Avoid this More time More on functional documentation. Now it was parallel to a session on acceptance testing with Fitnessse (but better explained)
7	Interactive	More structure Earlier on the day
8	Live demo Michael and Lars have great knowledge	
7	Good presentation Good examples used	Do not focus only on Fitnessse next time
8	Prepared examples Great clear slides Topics agile followup	Make it still more clear this is about a product demo, and not about the methods (yes I know, I should have known) Introduce the product a little bit, and its history, who wrote it, who invented it, when, etc...
9	Highlights on plusses/minuses of Ftinesse Clear cases	Leave practical example by audience out Add extra cases from own experience instead I.e. how to setup/integrate in continuous build process
8	Good overview of the how and why of Fit/Fitnessse Some details on SLIM Program using stickies: 2 projectors for the presentation	Earlier participation at the keyboard
8	I came away with a good idea of the value Fitnessse brings to projects and its implications	Better timeboxing
8	Live coding Two projectors Good overview Dojo	Bigger fonts More dojo, sooner -> more energy in session

8	Interesting topic. Very complementary with yesterday's presentation on Fitness	Timing
