

What I liked	To make it perfect
You really made me want to start a DOJO!	
The way Manu explained the story of coding dojo	Many should be more sexy! Maybe 15' of demo?
Nice idea, clear presentation	A bit more heating in the room
Great speaker. Very passionate about his topic	Have a second session that actually runs a dojo
Interesting rules/principles about the dojo	Make presentation available on the web
The topic	Better slides
Lots of good tips Shared the philosophy behind coding dojos	A bit more "alive" would be great
Idea Presentation Applicability	
Lots of background info to get a general understanding	Bit more interaction with the audience
Sharing lessons learned from 5 years experience	Shorten the introduction part Give a concrete example on what to do the dojo about
Practical tips	Reading the paper was not the right format
Good content/patterns/experience	More interactive, ask experienced people for input
Nice overview Entertaining speaker	I would show some concrete examples of things: e.g. a kata, code that improved, etc. Tell some things that went wrong
Experience report, similar to critique practices in art	More focus on the actual things that were learned in the dojo.
