

What I like	To make it perfect
<p>Amazing! Tonnes of inspiration for ideas and stuff I'm actually going to put in place immediately. Really, really useful. Thanks!</p> <p>Best bits: reminders that detail should feed to company mission – how to make this visible – and what the product owner should be doing. Don't let anything into the sprint not ready, or out to the sprint not done.</p>	
<p>Excellent. Extremely useful and thought-provoking. Must get the slides</p>	
<p>Fills in many gaps "New" thinking about PO explained Good integration of Kanban</p>	<p>More story mapping basics</p>
<p>Lots of valuable stuff for the Product Owner role Visible tools to show the business How and why multiple persons may cooperate in the PO role</p>	<p>Timeline/overview to implement the various tools A clear summary to take it all home Suggestion: turn this into a tutorial at a large conference</p>
<p>Excellent presentation Useful tools provided Some new ideas that might work for me It delivered on my expectations!</p>	
<p>Use Story hierarchy & Product Owner responsibility</p>	<p>A bit more time to provide examples (examples that were there were good)</p>
<p>The best session I attended so far! Thank you</p>	
<p>Great presentation Good sheets and figures Practical The whole value chain visualized</p>	
<p>Brilliant subject, flowed really well, very clearly explained</p>	<p>More time needed + practical ??? of building a story map Include it as a proper session at next XP Day</p>

Good speaker Good examples	Maybe interactive?
Definition of Ready	Maybe a bit more interaction would be nice But I liked it!
Very useful tips Recognize the problems other Pos all have Refreshing new ideas Keeping the overview	Talk slower 😊
Great session Got me thinking Definition of Ready!!	
Very good! Interesting techniques	Someone should write a book about this & more
Good set of tools for the PO role Good and experienced presentation	
Clear, simple, usable	
Very good presentation! The speaker and the subject	The time can be longer. It is interesting enough
