

What I like	To make it perfect
Interactivity Tips & tricks	Give some more pointers to technical methodology readin (books, blogs, articles)
Good forum for hearing about and discussing work management techniques	Participants should get the opportunity to identify the most interesting techniques they learned from their colleagues
	Discuss solutions of the others
It was fun, active	
Different view and practices that are actually used in real life	More about other visualizations (as mentioned in the description). E.g. mindmaps
Fun Good tips & tricks Simple + great session format	Laurent was sometimes hard to follow Try to make the presenter roles seamless blend over
Nice interactive session!	
Lively, practical and sensible advice	
Teamwork	More time
Sharing ideas about Scrum boards & process	
It's fun! I never really gave the taskboard that much thought	Spend less time talking about things that can be visualized More experience stories of the different taskboard strategies + pros and cons
Nice workshop Fun Todo	More discussion for the "perfect" scrum board
The interactive nature of the workshop	Link to digital visual tools Task board is only one example of visual management... Expand!
Good Examples	Exercises forcing more creative thinking More advanced usages
Ideas	Needed more content, more ideas than the single one eventually presented
Interactive. Creative	It was only taskboards. The information made me think that it would be about more different visual management things

Reflection on “standard” technique	Don’t just push your own solution when you get feedback Invite weird experiments
It was like I expected	Missed Kanban info
The feedback from everyone and the personal experience	Take out some more time for Q&A
Hands on Taskboard inspiration	Give time to let presenters communicate the feedback
Moderators introduced topic, then let us find our own way before showing their ideas as possible solution	Introduction was a bit lengthy and could have provided more of the science behind it for the time spent
Good test of agile understanding + knowledge sharing	Provide measurable acceptance criteria for an effective + efficient board Avoid hard coding time passing scenarios into board exercise
Hands on Very well prepared	Shorter introduction
Great to start with a quick intro followed by break-out sessions I liked the “this is how we would do it” at the end of the session Great with the visual open source pool	This session was a little basic for me – but that is not the presenters’ problem...
Discussion with people who see the use of taskboards differently	More time to discuss
